Summary

UX researcher with 6+ years across B2B SaaS and consumer products in edtech, healthcare, fintech and gaming. I have led 100+ projects, both decision-focused research that shapes product roadmaps and foundational work that keeps the customer at the center of the product. At Wayground, I took a leaky cross-product funnel from 5% to 13% adoption in 2 months with Product, Design and Engineering, and coached PMs and designers to run their own research. Now, as a consultant at SrotaBio, I own product and service design, taking a case management tool from discovery to a no-code MVP, and use AI hands-on for synthesis, prototyping and automating repeatable workflows.

Experience

Product and Service Design Consultant, SrotaBio · Sep 2026 – Present

0-to-1 PCOS care service, working with the co-founder and Chief Medical Officer.

- Defined the service design for the pilot (care pathway and SOPs covering intake, consent, data capture and clinical handoffs) by mapping patient and care-team workflows
- Led discovery and prototyping for the internal case management tool and wrote a 13-step journey PRD. Now building a no-code MVP in Google AppSheet to dogfood as care managers during the pilot, iterating on what we learn before the engineering-heavy full build
- Applied AI to a real team problem by building an AI-powered content creation tool that turns topics into brand-compliant social carousels, so the team can publish without a designer; use AI tools hands-on daily across research synthesis, secondary research and prototyping
- Set SrotaBio's positioning and go-to-market direction from social-media market research, through to tone, visual language and website direction with an external designer

UX Researcher (Freelance), Bajaj Finserv · Oct 2025 – Aug 2026

Stepped back from full-time work to complete an MS by Research in cognitive science; freelanced alongside it.

- Informed product decisions across four digital products (gold loan top-up, store locator, the TDS exemption form, and AI Bar, an AI-powered feature) through moderated usability and concept testing
- Made the redesigned TDS exemption form testable by building an interactive prototype
- Gave the team a clearer picture of the family and emotional pressures around gold, and where a gold loan fits in people's lives, through 2-hour discovery interviews tracing each person's relationship with gold across their life

UX Researcher, Wayground (formerly Quizizz) · Sep 2024 – Oct 2025

US EdTech, B2B SaaS for schools and districts. Embedded in two product pods with Product, Design, Engineering, Analytics and Sales; presented insights to senior leadership.

- Took a leaky cross-product funnel from 5% to 13% adoption in 2 months: used funnel analysis and mixed-methods research to find where math practice fit teachers' workflows, then shaped four changes with Engineering and Design across in-product placement, email, reporting and onboarding
- Gave the team a shared foundation for special education product decisions by mapping how support plans become legal mandates and who is accountable at the classroom, school and district level
- Lifted adoption by 8 percentage points by shaping co-teacher share access (~45% first-week adoption vs. ~20% typical) and exportable compliance reporting, giving the teachers responsible for compliance access to the tools
- Enabled pods without a researcher to run their own studies by coaching PMs, designers and content teams, from discussion guides and unbiased questioning to analysis, and started a company-wide research newsletter
- Opened access to hard-to-reach users such as special education teachers and coordinators by setting up recruitment, and kept studies compliant with US student-data privacy rules

UX Researcher, Rush by Hike · Sep 2022 – Apr 2024

Real-money casual gaming app for players in India's tier 2 and 3 cities. Lead researcher across 35+ projects on a 4-person research team, partnering with Product, Design, Engineering and Marketing.

- Led the research behind Winnings-to-Deposit, built after 2023's 28% GST and 30% TDS on winnings pushed players to withdraw, doubling revenue retention in the quarter after launch and making it one of the most-used features among high rollers
- Lifted Rush Locks adoption from 28% to 40% by finding that players withdrew to control their spending and keep money safe, and recommending self-timed locks with a more prominent placement
- Made leadership user immersions a driver of the quarterly roadmap: twice-yearly ethnographic visits to players' homes and surroundings that surfaced burning issues first-hand, such as a TDS cashback launched immediately after one immersion
- Cut recruitment time from 40–45 days to 14–15, and last-minute dropouts by 81%, by bringing recruitment in-house with a two-step verification process
- Led research for Rush's first house game, Tezz Patti, which quickly became the platform's third most popular game

UX Researcher, Sama Health (via RedAlkemi) · Jul 2022 – Sep 2022

0-to-1 mental health app for the Indian diaspora in the Gulf. Lead researcher, working directly with the CEO and lead designer.

- Grounded the product's direction in foundational discovery research on the most pressing mental health struggles and needs of the Indian diaspora in the Middle East
- Took the concept from market research and competitor analysis to a proof of concept, refined through generative research, wireframing and usability testing

UX Research Intern, Red Baton Design Studio · Mar 2022 – Jun 2022

- Led foundational research and usability testing for Rangmanch, an in-house educational app about gender and sexual minorities, through to launch; also ran studies for clients including Flipkart and Urban Company

Research Assistant, Design Lab, IIT Delhi · Dec 2021 – Feb 2022

- Evaluated India's Atal Tinkering Labs through interviews with students and teachers and statistical analysis of feedback data

Research Assistant, Cognitive Science Lab, IIIT Hyderabad · 2020 – 2021

- Behavioral and cognitive science research on music cognition, which eventually grew into my MS work

Skills

- **Research:** mixed-methods, generative and evaluative research, ethnographic interviews, usability and concept testing, surveys, Jobs-to-be-Done, customer personas, journey mapping, statistical analysis in Python and R, research operations, coaching non-researchers
- **Product:** product discovery, funnel analysis, service design, product requirements documents, minimum viable product (MVP) scoping, no-code prototyping
- **AI:** hands-on experience with AI tools for research analysis and synthesis, secondary research at scale and prototyping; building AI-powered analysis tools and content creation tools that generate brand-compliant social media content
- **Tools:** Google AppSheet, Figma, Dovetail, Typeform, ClickUp

Education

MS by Research in Cognitive Science, IIIT Hyderabad · 2026

- Thesis: a quantitative study of music and social media as social surrogates during COVID-19 isolation in India
- 2 extended abstracts published at ICMPC'23

B.Tech in Computer Science, IIIT Hyderabad · 2019
